3. Curriculum Approaches to Preventing Crisis Events
(Social and Personal)

3a. Violence Prevention

a-1 Second Step: A Violence Prevention Curriculum: This school-based social skills curriculum for preschool through junior high focuses on changing the attitudes and behaviors that contribute to violence. It teaches the same three skill units at each grade level: Empathy, Impulse Control, and Anger Management. Lesson content varies according to the grade level, and the skills practiced are designed to be developmentally appropriate. There were no significant teacher- or parent-reported differences between those students participating in Second Step and a control group. However, two-weeks after the intervention was completed behavioral observations revealed that participants showed an overall decrease in physical aggression, and an increase in neutral/prosocial behavior, compared to the control group. Most effects persisted 6 months later.

For more information, see:

For project information, contact:

a-2 Responding in Peaceful and Positive Ways (RIPP) Program: This 25 session sixth grade curriculum focuses on social/cognitive skill-building to promote nonviolent conflict resolution and positive communication. It is taught during a 45-minute class period once a week. Participants showed significantly lower rates of fighting, bringing weapons to school, and in-school suspensions than control subjects.

For project information, contact:

a-3 First Step to Success: An early intervention program for grades K-3 that takes a collaborative home and school approach to diverting at-risk children from adjustment problems, school failure and drop-out, social juvenile delinquency in adolescence, and gang membership and interpersonal
school in teaching children a behavior pattern that contributes to school success and the development of friendship. Children participate in a social skills curriculum, and parents are taught key skills for supporting and improving their child’s school adjustment and performance. As indicated by teacher ratings and direct observations, students who successfully complete the program show sustained behavior changes in adaptive, aggressive, and maladaptive behavior, and in the amount of time spent appropriately engaged in teacher-assigned tasks. Follow-up studies show intervention effects persist up to two-years beyond the end of the initial intervention phase.

**Project ACHIEVE**: A school wide prevention and early intervention program targeting students who are academically and socially at risk. Students learn social skills, problem-solving methods, and anger-reduction techniques. The program reports reduced aggression and violence in Project ACHIEVE schools. For example, reported disciplinary referrals decreased by 67%. Specifically, referrals for disobedient behavior dropped by 86%, fighting by 72% and disruptive behavior by 88%. Referrals for special education testing decreased 75% while the number of effective academic and behavioral interventions in the regular classroom significantly increased. Suspensions dropped to one-third of what they had been three years before. Similar improvements are reported for grade retention, achievement test scores, and academic performance, and, during a four year period, no student was placed in the county’s alternative education program. The model’s success has led to its adoption in over 20 additional sites across the United States.

Appendix D: Crisis Response and Prevention

**a-5 Bullying Prevention Program:** This is a universal intervention for reduction and prevention of bully/victim problems. School staff have the primary responsibility for introducing and implementing the program. It targets elementary, middle, and junior high schools, with all students participating in most aspects. Additional individual interventions are targeted at students who are identified as bullies or victims of bullying. The program finds a substantial reduction in boys’ and girls’ reports of bullying and victimization and of general antisocial behavior such as vandalism, fighting, theft and truancy. They also note significant improvements in the "social climate" of the class, as reflected in students’ reports of improved order and discipline, more positive social relationships, and more positive attitudes toward schoolwork and school.

**a-6 Conflict Resolution and Peer Mediation Projects (CR/PM):** Nine CR/PM programs throughout the country were evaluated. Data indicate that the projects may reduce frequency of fighting and other undesirable behaviors at school, increase knowledge and modify student’s attitudes about conflict, improve school discipline, and increase attendance. However, it is stressed that these findings are based on preliminary data, and success varies depends on how the curriculum is implemented.

*For more information, see:*

**a-7 PeaceBuilders:** This is a school-wide violence prevention program for elementary schools (K-5). It focuses on reducing students’ hostility and aggression by changing the school climate and promoting prosocial behavior. The intervention involves norm-setting, peace-building, and communication skills development. It reinforces prosocial behavior and enhances parent education and involvement, and includes mass media tie-ins. A year before it was introduced, 120 children were suspended and about 30 were arrested for crimes in a participating community. Two years into the program, the number of suspensions dropped to five, and there were no arrests for community crimes. One school reported that major student fights dropped from 125 to 23; another school reported a decrease from 180 to 24. Outcome assessments are still underway.

Appendix D: Crisis Response and Prevention

a-8 **Positive Adolescent Choices Training (PACT):** This is designed to reduce the chances that African-American and other at-risk youth will be victims or perpetrators of violence. Primarily targets youth between 12 and 16 identified as socially deficient or with a history of violence. Participants receive hands-on training and practice in 3 areas: prosocial skills, anger control, and violence risk education. Data suggest that those who completed the program showed reduced violence-related behavior as well as gains in skills predictive of future abilities to avoid violence. The data also suggest that others perceived the trained participants to have improved social skills and that trainees themselves had more confidence in their abilities to perform the new behaviors.

a-9 **Resolving Conflict Creatively Program (RCCP):** This curriculum stresses modeling of nonviolent alternatives for dealing with conflict and teaches negotiation and other conflict resolution skills. Conflict resolution and communication skills are taught in the classroom and practiced at least once a week. Several students are trained as “mediators” to assist others in resolving conflicts. Teachers who participate report decreases in name-calling and physical violence among students. When students are tested, most learn the key concepts of conflict resolution and are able to apply them when responding to hypothetical conflicts. In addition, students themselves have reported getting in fewer fights and engaging less frequently in name-calling compared with matched control groups. For the peer mediation component, 80% of students and teachers report that students are helped by contact with mediators. Nine out of ten teachers who participated in the program said that they had improved understanding of children’s needs and were more willing to let students take responsibility for resolving their own conflicts.

Linda Lantieri, RCCP National Center, 163 3rd Ave, Room 103, New York, NY 10003, (212) 387-0225.

a-10 **The Mediation in the Schools Program:** This is designed to promote positive resolution of conflict in schools. It consists of three components: conflict management curriculum for the classroom; adult modeling of mediation in conflict resolution; and training of student mediators to provide mediation services to other students. Evaluation data indicate that the program seemed to be “owned” by the students, and participants were described as being more in control and empowered, as well as exhibiting higher self-esteem. Coordinators and administrators reported decreased levels of violence. Program teachers perceived less violence and hurtful behaviors among students believed that the program was effective in teaching students alternative, positive dispute resolution strategies and in decreasing levels of violence at school.

Appendix D: Crisis Response and Prevention

**a-11 Lions-Quest Working Toward Peace:** This program is designed to help young people develop lifelong habits of peaceful conflict resolution. The four-part course of study for grades 6-8 includes sessions on managing anger, resolving conflicts peacefully, and promoting peace. An optional one-day workshop provides an introduction to and hands-on experience with the curriculum. Program goals are: To help students understand the value of peaceful conflict resolution and study peaceful role models; To enable students to learn ways to manage their own anger; To teach students a wide repertoire of techniques for reducing the level of tension in conflicts and resolving the conflicts peacefully; To encourage young people to apply their skills by planning and carrying out a service-learning project relating to peaceful conflict resolution. It is viewed as equipping educators and parents to help young adolescents take responsibility for finding peaceful solutions to conflict. Program implementation results in improved school climate, fewer discipline referrals, a safer school environment, and increased family and community involvement.

**a-12 Michigan Model for Comprehensive School Health Education.** This is implemented in over 90% of Michigan’s public schools and more than 200 private and charter schools servicing grades K-12. The model is also in place in over 42 states, foreign countries, universities and medical schools. The program was established as a cooperative effort of seven state agencies to provide an efficient delivery mechanism for key disease prevention and health promotion messages. The current curriculum facilitates interdisciplinary learning through lessons that integrate health education into other curricula (e.g., language arts, science, math). Stated advantages of the program include: Cost savings on the purchase of support materials; training for teachers; responsiveness to the need for new curricula; efficient delivery of a wide range of curricula and support materials; mechanisms for parent support; and a nationally recognized, research based curriculum. Research reports indicate that the Michigan Model substance abuse lessons had a statistically significant positive impact in curtailting rates of alcohol, tobacco and marijuana use in middle school students. A 1996 national program analysis done by Drug Strategies, Inc. of Washington, D.C. and published under the title “Making the Grade”, designated the Michigan Model as one of the top substance abuse prevention programs in the United States. The Michigan Model was the only comprehensive health program to receive this “A” designation. They also rated the Michigan Model as one of the best violence prevention programs in the United States.

3-b Suicide Prevention

b-1 Project 1: This project reported positive effects on suicide risk for junior-high students in Israel. In a randomized trial with 237 8th grade students, the 12-week group cognitive-behavioral program reports significant reductions in suicides among treated boys, as measured by the culturally adapted Israeli Index of Potential Suicide (IIPS). Effects for girls did not reach the level of significance.

For more information, contact:

b-2 Project 2: This project was evaluated in a randomized trial examining 393 students (including some conduct disordered students). It reported a significant reduction in suicides, in this case among 11th grade students from 6 high schools in Israel. Across all schools, the authors report significant effects on suicidal tendencies, coping skills, and ego identity.

For more information, contact:

3-c Physical/Sexual Abuse Prevention: This program is a child abuse prevention program for preschool aged to sixth-grade students. Developed in 1984 in Georgia, the goal is to prevent child abuse and reduce the trauma associated with it. The curriculum includes age-appropriate information and strategies to limit emotional and sexual abuse. Modifications have been made for to accommodate developmental delay. Results from a small sample suggest that children as young as kindergarten age can learn knowledge and skills designed to prevent sexual abuse.
